AMPLIFIERS

Power amplifier module combined with duplexer CDMA-based PCS phone p486

ANTENNA ACCESSORIES

Circularly polarised wire antenna with a dual rhombic loop p219
Combined EM field/linear and nonlinear circuit simulation using the FDTD method p185
Cutoff and bandwidth characteristics of a circular coaxial waveguide with four T-septa symmetrically placed in the inner conductor p366
Design of a wideband microstrip bowtie patch antenna p137
Design of circular patch antennas on ferrite substrates p49
Efficient technique for determining beam scanning characteristics of axisymmetric paraboloid reflectors p25
Experimental study of novel resonant circular arrays p92
Meander-line grid-array antenna p309
Microstripline- and stripline-fed aperture-coupled cylindrical rectangular microstrip antennas p257
New serially fed polarisation-agile linear array of patches p392
Numerical analysis of honeycomb antennas with an electromagnetic coupling feed system p99
Pattern prediction of extended hemispherical-lens/objective-lens antenna system at millimetre wavelengths p295
Ray tracing fields backscattered from curved dichroic structures p406
Triangular-patch model of bowtie antennas: validation against Brown and Woodward p465

ANTENNA ARRAYS

Analysis of mutual coupling in a cavity-backed coaxial array of annular-slot antennas p427
Analysis of the far-field pattern of an optical waveguide array using the finite-difference beam-propagation method p175
Beamforming for circular and semicircular array antennas for low-cost wireless LAN data communications systems p153
Design procedure for FSS with wide transmission band and rapid rolloff p508
Experimental study of novel resonant circular arrays p92
Generalisation of an array-failure-correction method p332
Meander-line grid-array antenna p309
Modified Chebyshev arrays p45
Mutual coupling compensation in small planar array antennas p1
New serially fed polarisation-agile linear array of patches p392
Numerical analysis of honeycomb antennas with an electromagnetic coupling feed system p99
Numerical optimisation of slot parameters for a concentric array radial line slot antenna p141
Optimisation of synthesised array excitations using array polynome complex root swapping and genetic algorithms p460
Performance of active antenna oscillator arrays under modulation for communication systems p313
Power synthesis of reconfigurable conformal arrays with phase-only control p131
Retrodirective beams and their application to low sidelobe pattern synthesis in small planar phased arrays p344

ANTENNA THEORY

Accelerant method for Green's function of horizontal dipole in parallel plate waveguide p430
Analysis of mutual coupling in a cavity-backed coaxial array of annular-slot antennas p427
Analysis of the far-field pattern of an optical waveguide array using the finite-difference beam-propagation method p175
Antenna radiation pattern measurement using a near-field wire scattering technique p263
Beamforming for circular and semicircular array antennas for low-cost wireless LAN data communications systems p153
Circularly polarised wire antenna with a dual rhombic loop p219
Combined EM field/linear and nonlinear circuit simulation using the FDTD method p185
Control of microstrip antenna radiation characteristics by ground plane size and shape p207
CPW-fed slot antenna with wide radiating apertures p104
Design of a wideband microstrip bowtie patch antenna p137
Design of circular patch antennas on ferrite substrates p49
Design of corner reflector antennas using FDTD p481
Design procedure for FSS with wide transmission band and rapid rolloff p508
Efficient technique for determining beam scanning characteristics of axisymmetric paraboloid reflectors p25
General entire-domain Galerkin method for analysis of wire antennas in the presence of dielectric bodies p13
Generalisation of an array-failure-correction method p332
Low-profile inverted-F antenna with parasitic elements on an infinite ground plane p321
Meander-line grid-array antenna p309
Microstripline- and stripline-fed aperture-coupled cylindrical rectangular microstrip antennas p257
Modified Chebyshev arrays p45
Mutual coupling compensation in small planar array antennas p1
Near-field-far-field transformation from nonredundant plane-polar data: effective modellings of the source p33
NF-FF transformation with cylindrical scanning: an effective technique for elongated antennas p369
Numerical analysis of honeycomb antennas with an electromagnetic coupling feed system p99
Optimisation of synthesised array excitations using array polynome complex root swapping and genetic algorithms p460
Pattern prediction of extended hemispherical-lens/objective-lens antenna system at millimetre wavelengths p295
Performance of active antenna oscillator arrays under modulation for communication systems p313
Performance of shaped beam quadrifilar antennas on the METOP spacecraft p19
Power synthesis of reconfigurable conformal arrays with phase-only control p131
Quasistatic capacitance and frequency-dependent effective permittivity of multilayer microstrip patch antennas p75
Radio propagation characteristics in curved tunnels p327
Ray tracing fields backscattered from curved dichroic structures p406
Reflections inside an elliptical dielectric lens antenna p243
Retrodirective beams and their application to low sidelobe pattern synthesis in small planar phased arrays p344
Scattering analysis of arbitrarily shaped cylinders in a focused beam system p289
Simple circuit model for coax-fed stacked rectangular microstrip patch antenna p268
Simple formulas for the gain and far-field of open-ended rectangular waveguides p80
Square spiral antenna on dielectric half-space: analysis using an electric field equation formulated by a finite-difference technique p70
Time domain calculation of the parameters of thin wire antennas and scatterers in a half-space configuration p57
Triangular-patch model of bowtie antennas: validation against Brown and Woodward p465

ARRAY SIGNAL PROCESSING

Beamforming for circular and semicircular array antennas for low-cost wireless LAN data communications systems p153
Generalisation of an array-failure-correction method p332

CIRCUIT THEORY AND DESIGN

Combined EM field/linear and nonlinear circuit simulation using the FDTD method p185
Efficient simulation of microstrip circuits using adapted wavelets p354

COMMUNICATION SYSTEM THEORY

Measurements and prediction model optimisation for signal attenuation in vegetation media at centimetre wave frequencies p201
Power amplifier module combined with duplexer CDMA-based PCS phone p486

COMPUTATIONAL COMPLEXITY

Improvement of the computation efficiency for a ray launching model p303

COMPUTER APPLICATIONS

Large-domain integral-equation method for analysis of general 3 D electromagnetic structures p491

COMPUTER COMMUNICATIONS

Beamforming for circular and semicircular array antennas for low-cost wireless LAN data communications systems p153

DIELECTRIC MATERIALS AND DEVICES

Reflections inside an elliptical dielectric lens antenna p243
Triple mode dielectric resonator hybrid reflection filters p337

EARTH SCIENCES

Line-of-sight EM propagation experiment at 10.25 GHz in the tropical ocean evaporation duct p65

ELECTROMAGNETIC THEORY

3D-TLM pattern recognitions in free space p387
Asymptotic boundary condition for corrugated surfaces, and its application to scattering from circular cylinders with dielectric filled corrugations p116
Design procedure for FSS with wide transmission band and rapid rolloff p508
Features of creeping waves propagation on the dielectric-coated circular cylinder p179
General entire-domain Galerkin method for analysis of wire antennas in the presence of dielectric bodies p13
Influence of air humidity on microwave depolarisation in semi-arid areas p147
Line-of-sight EM propagation experiment at 10.25 GHz in the tropical ocean evaporation duct p65
Modal analysis at the junction formed by a circular or an elliptic waveguide and a translated and rotated elliptic waveguide p501
Modelling nonlinear and dispersive propagation problems by using the TLM method p193
Numerical computation of complex image Green's functions for multilayer dielectric media: near-field zone and the interface region p449
Pattern prediction of extended hemispherical-lens/objective-lens antenna system at millimetre wavelengths p295
Performance of the progressive numerical method and its comparison with the modified spatial decomposition technique in solving large scattering problems p169
Phase characteristics of thick metal gratings p411
Plane wave reflection from a chiral slab backed by soft and hard surfaces with application to polarisation transformers p299
Reflection and transmission coefficients for thin bianisotropic layers p163
Reflections inside an elliptical dielectric lens antenna p243
Scattering analysis of arbitrarily shaped cylinders in a focused beam system p289
Spectral Green's functions for multilayer media in a convenient computational form p85
TE/TM decomposition of electromagnetic sources in a nonreciprocal anisotropic medium p109
Time domain calculation of the parameters of thin wire antennas and scatterers in a half-space configuration p57
Use of Coifman intervallic wavelets in 2-D and 3-D scattering problems p471

ELECTROMAGNETISM

3D-TLM pattern recognitions in free space p387
Asymptotic approximation of some integrals involved in EFIE solutions using the method of moments p361
Asymptotic boundary condition for corrugated surfaces, and its application to scattering from circular cylinders with dielectric filled corrugations p116
Combined EM field/linear and nonlinear circuit simulation using the FDTD method p185
Dyadic Green's functions for the parallel-plate chirowaveguide p273
Fast computation of the nonsymmetrical components of the Green's function for multilayer media using complex images p285
Features of creeping waves propagation on the dielectric-coated circular cylinder p179
Large-domain integral-equation method for analysis of general 3 D electromagnetic structures p491
Numerical computation of complex image Green's functions for multilayer dielectric media: near-field zone and the interface region p449
Performance of the progressive numerical method and its comparison with the modified spatial decomposition technique in solving large scattering problems p169
Phase characteristics of thick metal gratings p411
Plane wave reflection from a chiral slab backed by soft and hard surfaces with application to polarisation transformers p299
Reflection and transmission coefficients for thin bianisotropic layers p163
Scattering analysis of arbitrarily shaped cylinders in a focused beam system p289
TE/TM decomposition of electromagnetic sources in a nonreciprocal anisotropic medium p109
Use of Coifman intervallic wavelets in 2-D and 3-D scattering problems p471

ELECTRON TUBES

Theoretical analysis of ridge-loaded ring-plane slow wave structure by variational methods p397

FILTERS AND FILTERING

Detection of submillimetre wave radiation of a target using a high Tc superconducting detector p190
Field theory based design and comparison of two kinds of quasi-planar bandpass filters p441
Intermodulation distortion in active microwave filters p7
Triple mode dielectric resonator hybrid reflection filters p337

INSTRUMENTATION AND MEASUREMENT

Detection of submillimetre wave radiation of a target using a high Tc superconducting detector p190

LINEAR NETWORK ANALYSIS

Combined EM field/linear and nonlinear circuit simulation using the FDTD method p185
Transfer functions of lumped distributed multibranch networks p279

MAGNETIC MATERIALS AND DEVICES

FDTD analysis of EM wave circulated by a magnetised ferrite body of arbitrary shape p433

MATHEMATICAL TECHNIQUES

Asymptotic approximation of some integrals involved in EFIE solutions using the method of moments p361
Asymptotic boundary condition for corrugated surfaces, and its application to scattering from circular cylinders with dielectric filled corrugations p116
CPW-fed slot antenna with wide radiating apertures p104
Dyadic Green's functions for the parallel-plate chirowaveguide p273
Fast computation of the nonsymmetrical components of the Green's function for multilayer media using complex images p285
Features of creeping waves propagation on the dielectric-coated circular cylinder p179
General entire-domain Galerkin method for analysis of wire antennas in the presence of dielectric bodies p13
Measurements and prediction model optimisation for signal attenuation in vegetation media at centimetre wave frequencies p201
Numerical computation of complex image Green's functions for multilayer dielectric media: near-field zone and the interface region p449
Numerical optimisation of slot parameters for a concentric array radial line slot antenna p141
Optimisation of synthesised array excitations using array polynome complex root swapping and genetic algorithms p460
Performance of the progressive numerical method and its comparison with the modified spatial decomposition technique in solving large scattering problems p169
Quasistatic capacitance and frequency-dependent effective permittivity of multilayer microstrip patch antennas p75
Reflection and transmission coefficients for thin bianisotropic layers p163
TE/TM decomposition of electromagnetic sources in a nonreciprocal anisotropic medium p109
Use of Coifman intervallic wavelets in 2-D and 3-D scattering problems p471

MICROWAVE CIRCUITS

Intermodulation distortion in active microwave filters p7
Low noise SIS receiver performance using Pb alloy tunnel junctions p375
Performance of active antenna oscillator arrays under modulation for communication systems p313
Power amplifier module combined with duplexer CDMA-based PCS phone p486

MICROWAVE MEASUREMENT TECHNIQUES

Detection of submillimetre wave radiation of a target using a high Tc superconducting detector p190

MODULATION

Performance of active antenna oscillator arrays under modulation for communication systems p313

MODULATORS AND DEMODULATORS

Low noise SIS receiver performance using Pb alloy tunnel junctions p375

NONLINEAR NETWORK ANALYSIS

Combined EM field/linear and nonlinear circuit simulation using the FDTD method p185
Intermodulation distortion in active microwave filters p7
Modelling nonlinear and dispersive propagation problems by using the TLM method p193

NUMERICAL ANALYSIS

Accelerant method for Green's function of horizontal dipole in parallel plate waveguide p430
Analysis of mutual coupling in a cavity-backed coaxial array of annular-slot antennas p427
Analysis of the far-field pattern of an optical waveguide array using the finite-difference beam-propagation method p175
Asymptotic approximation of some integrals involved in EFIE solutions using the method of moments p361
Asymptotic boundary condition for corrugated surfaces, and its application to scattering from circular cylinders with dielectric filled corrugations p116
Characteristics of quad-ridged coaxial waveguides for dual-band horn applications p225
Circularly polarised wire antenna with a dual rhombic loop p219
Combined EM field/linear and nonlinear circuit simulation using the FDTD method p185
Control of microstrip antenna radiation characteristics by ground plane size and shape p207
CPW-fed slot antenna with wide radiating apertures p104
Design of corner reflector antennas using FDTD p481
Efficient simulation of microstrip circuits using adapted wavelets p354
Fast computation of the nonsymmetrical components of the Green's function for multilayer media using complex images p285
FDTD analysis of EM wave circulated by a magnetised ferrite body of arbitrary shape p433
Features of creeping waves propagation on the dielectric-coated circular cylinder p179
Field theory based design and comparison of two kinds of quasi-planar bandpass filters p441
General entire-domain Galerkin method for analysis of wire antennas in the presence of dielectric bodies p13
Hybrid finite element solution of a quadrupole gyromagnetic waveguide p128
Inductance computation for coplanar waveguide discontinuities with finite metallisation thickness p496
Large-domain integral-equation method for analysis of general 3 D electromagnetic structures p491
Meander-line grid-array antenna p309
Microstripline- and stripline-fed aperture-coupled cylindrical rectangular microstrip antennas p257
Modal analysis at the junction formed by a circular or an elliptic waveguide and a translated and rotated elliptic waveguide p501
Mode-matching analysis of a waveguide junction formed by a circular and a larger elliptic waveguide p123
Mutual coupling compensation in small planar array antennas p1
NF-FF transformation with cylindrical scanning: an effective technique for elongated antennas p369
Numerical analysis of honeycomb antennas with an electromagnetic coupling feed system p99
Numerical computation of complex image Green's functions for multilayer dielectric media: near-field zone and the interface region p449
Performance of shaped beam quadrifilar antennas on the METOP spacecraft p19
Performance of the progressive numerical method and its comparison with the modified spatial decomposition technique in solving large scattering problems p169
Power synthesis of reconfigurable conformal arrays with phase-only control p131
Procedure for analysis of microstrip patch antennas using the method of moments p455
Reflection and transmission coefficients for thin bianisotropic layers p163
Sidewall inclined slot in a rectangular waveguide: theory and experiment p233
Square spiral antenna on dielectric half-space: analysis using an electric field equation formulated by a finite-difference technique p70
TE/TM decomposition of electromagnetic sources in a nonreciprocal anisotropic medium p109
Theoretical analysis of ridge-loaded ring-plane slow wave structure by variational methods p397
Time domain calculation of the parameters of thin wire antennas and scatterers in a half-space configuration p57
Transfer functions of lumped distributed multibranch networks p279
Triangular-patch model of bowtie antennas: validation against Brown and Woodward p465
Use of Coifman intervallic wavelets in 2-D and 3-D scattering problems p471
Voltage-current definition of impedance of double ridge waveguide using the finite element method p39

OPTICAL LINKS AND EQUIPMENT

Analysis of the far-field pattern of an optical waveguide array using the finite-difference beam-propagation method p175

OPTICAL MATERIALS AND DEVICES

Analysis of the far-field pattern of an optical waveguide array using the finite-difference beam-propagation method p175

OPTIMISATION

Measurements and prediction model optimisation for signal attenuation in vegetation media at centimetre wave frequencies p201
Numerical optimisation of slot parameters for a concentric array radial line slot antenna p141

PROBABILITY AND STATISTICS

Propagation aspects of frequency-hopping spread spectra p249
Radio propagation characteristics in curved tunnels p327

RADAR AND RADIONAVIGATION

Physical optics analysis of the field backscattered by a depolarising trihedral corner reflector p213

RADAR THEORY

Physical optics analysis of the field backscattered by a depolarising trihedral corner reflector p213

RADIO SYSTEMS

2D ray-tracing model for indoor radio propagation at millimetre frequencies, and the study of diversity techniques p349
Beamforming for circular and semicircular array antennas for low-cost wireless LAN data communications systems p153
Improvement of the computation efficiency for a ray launching model p303
Measurements and prediction model optimisation for signal attenuation in vegetation media at centimetre wave frequencies p201
Performance of active antenna oscillator arrays under modulation for communication systems p313
Performance of shaped beam quadrifilar antennas on the METOP spacecraft p19
Power amplifier module combined with duplexer CDMA-based PCS phone p486
Propagation aspects of frequency-hopping spread spectra p249
Radio propagation characteristics in curved tunnels p327
Triple mode dielectric resonator hybrid reflection filters p337

RADIOWAVE PROPAGATION

2D ray-tracing model for indoor radio propagation at millimetre frequencies, and the study of diversity techniques p349
Improvement of the computation efficiency for a ray launching model p303
Influence of air humidity on microwave depolarisation in semi-arid areas p147
Line-of-sight EM propagation experiment at 10.25 GHz in the tropical ocean evaporation duct p65
Measurements and prediction model optimisation for signal attenuation in vegetation media at centimetre wave frequencies p201
Observations of the directional characteristics of ionospherically propagated HF radio channel sounding signals over two high latitude paths p379
Performance of shaped beam quadrifilar antennas on the METOP spacecraft p19
Physical optics analysis of the field backscattered by a depolarising trihedral corner reflector p213
Propagation aspects of frequency-hopping spread spectra p249
Radio propagation characteristics in curved tunnels p327

SIGNAL PROCESSING

Beamforming for circular and semicircular array antennas for low-cost wireless LAN data communications systems p153
Generalisation of an array-failure-correction method p332
Near-field-far-field transformation from nonredundant plane-polar data: effective modellings of the source p33

SINGLE ANTENNAS

Application of hybrid radiation modes of a microstrip line in the design of rectangular microstrip antennas p421
Characteristics of quad-ridged coaxial waveguides for dual-band horn applications p225
Circular microstrip patch antennas on glass for vehicle applications p416
Circularly polarised wire antenna with a dual rhombic loop p219
Combined EM field/linear and nonlinear circuit simulation using the FDTD method p185
Control of microstrip antenna radiation characteristics by ground plane size and shape p207
Design of a wideband microstrip bowtie patch antenna p137
Design of circular patch antennas on ferrite substrates p49
Design of corner reflector antennas using FDTD p481
Efficient technique for determining beam scanning characteristics of axisymmetric paraboloid reflectors p25
General entire-domain Galerkin method for analysis of wire antennas in the presence of dielectric bodies p13
Low-profile inverted-F antenna with parasitic elements on an infinite ground plane p321
Microstripline- and stripline-fed aperture-coupled cylindrical rectangular microstrip antennas p257
Near-field-far-field transformation from nonredundant plane-polar data: effective modellings of the source p33
Nonideal radiation pattern of simple leaky-wave antennas explained in terms of free resonant modes p424
Pattern prediction of extended hemispherical-lens/objective-lens antenna system at millimetre wavelengths p295
Performance of shaped beam quadrifilar antennas on the METOP spacecraft p19
Procedure for analysis of microstrip patch antennas using the method of moments p455
Quasistatic capacitance and frequency-dependent effective permittivity of multilayer microstrip patch antennas p75
Reflections inside an elliptical dielectric lens antenna p243
Simple approach to determine resonant frequencies of microstrip antennas p159
Simple circuit model for coax-fed stacked rectangular microstrip patch antenna p268
Simple formulas for the gain and far-field of open-ended rectangular waveguides p80
Square spiral antenna on dielectric half-space: analysis using an electric field equation formulated by a finite-difference technique p70
Time domain calculation of the parameters of thin wire antennas and scatterers in a half-space configuration p57
Triangular-patch model of bowtie antennas: validation against Brown and Woodward p465

SUPERCONDUCTING MATERIALS AND DEVICES

Detection of submillimetre wave radiation of a target using a high Tc superconducting detector p190
Low noise SIS receiver performance using Pb alloy tunnel junctions p375

TELECOMMUNICATION

Power amplifier module combined with duplexer CDMA-based PCS phone p486

TRANSMISSION LINE THEORY

Accelerant method for Green's function of horizontal dipole in parallel plate waveguide p430
Characteristics of quad-ridged coaxial waveguides for dual-band horn applications p225
Cutoff and bandwidth characteristics of a circular coaxial waveguide with four T-septa symmetrically placed in the inner conductor p366
Design of circular patch antennas on ferrite substrates p49
Dyadic Green's functions for the parallel-plate chirowaveguide p273
FDTD analysis of EM wave circulated by a magnetised ferrite body of arbitrary shape p433
Field theory based design and comparison of two kinds of quasi-planar bandpass filters p441
Hybrid finite element solution of a quadrupole gyromagnetic waveguide p128
Inductance computation for coplanar waveguide discontinuities with finite metallisation thickness p496
Modal analysis at the junction formed by a circular or an elliptic waveguide and a translated and rotated elliptic waveguide p501
Mode-matching analysis of a waveguide junction formed by a circular and a larger elliptic waveguide p123
Modelling nonlinear and dispersive propagation problems by using the TLM method p193
Propagation modes of a cylindrical waveguide loaded by a coaxial chiral cylinder p229
Quality factor of an evanescent mode Okada resonator p239
Sidewall inclined slot in a rectangular waveguide: theory and experiment p233
Simple formulas for the gain and far-field of open-ended rectangular waveguides p80
Spectral Green's functions for multilayer media in a convenient computational form p85
Transfer functions of lumped distributed multibranch networks p279
Triple mode dielectric resonator hybrid reflection filters p337
Voltage-current definition of impedance of double ridge waveguide using the finite element method p39

WAVEGUIDE COMPONENTS

Efficient simulation of microstrip circuits using adapted wavelets p354
FDTD analysis of EM wave circulated by a magnetised ferrite body of arbitrary shape p433
Field theory based design and comparison of two kinds of quasi-planar bandpass filters p441
Modal analysis at the junction formed by a circular or an elliptic waveguide and a translated and rotated elliptic waveguide p501
Mode-matching analysis of a waveguide junction formed by a circular and a larger elliptic waveguide p123
Quality factor of an evanescent mode Okada resonator p239
Triple mode dielectric resonator hybrid reflection filters p337

WAVEGUIDES

Characteristics of quad-ridged coaxial waveguides for dual-band horn applications p225
Cutoff and bandwidth characteristics of a circular coaxial waveguide with four T-septa symmetrically placed in the inner conductor p366
Inductance computation for coplanar waveguide discontinuities with finite metallisation thickness p496
Propagation modes of a cylindrical waveguide loaded by a coaxial chiral cylinder p229
Sidewall inclined slot in a rectangular waveguide: theory and experiment p233
Voltage-current definition of impedance of double ridge waveguide using the finite element method p39
